Professional profile

I'm a software developer with a particular interest in cloud architecture and artificial intelligence. At Go Reply, I work on Google Cloud projects: I develop backend services in Python and work with clients to understand their needs and decide how to address them. I graduated with honours from the University of Bologna with an MSc in Computer Science and Engineering, with a thesis on fairness in machine learning. Outside work, I enjoy cooking, playing video games and spending time with friends.

Education

MSc in Computer Science and Engineering

University of Bologna, Cesena | 2022 - 2025 | **Final grade: 110/110 cum laude** (highest distinction)

Professional experience

Cloud Developer / IT Consultant

Go Reply | September 2025 - present

- Contribute to Google Cloud solution design and development, from requirements gathering to POC evaluation and architecture decisions.
- Build Python and FastAPI services for serverless applications, data processing and cloud integrations.
- Develop Google ADK agents integrated with BigQuery; contribute to CI/CD, IAM, monitoring, logging, troubleshooting and technical support.

IT Trainer

SER.IN.AR | 2024 - 2025

Delivered four courses to four groups: basic Excel for school staff, LEGO Mindstorms robotics for a middle school class, and Snap programming for two primary school classes.

Frontend Developer

Visup | May 2023 - December 2023

Developed the Angular frontend of an Industry 4.0 data visualisation dashboard, collaborating in an Agile team with Git and CI/CD.

Technical skills

Language: Python. **Frameworks, libraries and SDKs:** FastAPI, Pydantic, pytest, Google Agent Development Kit (ADK), Angular (previous experience).

Google Cloud Platform (GCP): Cloud Run, Cloud Storage, BigQuery, Firestore, Pub/Sub, Cloud Tasks, Cloud Scheduler, IAM, Secret Manager, Cloud Monitoring, Cloud Logging.

Tools: Git, GitHub Actions, Cloud Build, containers.

Development practices: CI/CD, automated testing, Agile.
Architectures: serverless, microservices, hexagonal architecture.

Selected projects

FairLib, MSc thesis

Python, machine learning fairness

Python library implementing pre-processing and in-processing fairness techniques, used in the European AEQUITAS project. Listed as a contributor to an AEQUITAS research dataset on Zenodo.

GitHub repository | Dataset on Zenodo

PositionPal, User Service

Kotlin, gRPC, RabbitMQ, PostgreSQL

User registration and profile microservice with hexagonal architecture, automated tests and contributions to the CI/CD pipeline.

GitHub repository | Project documentation

NesGen, generative music

Python, TensorFlow, PyTorch, MidiTok

Transformer and GAN approaches for generating NES-style MIDI music, including tokenisation and fine-tuning on the NES-MDB dataset.

GitHub repository

Scooby, web crawler

Scala 3, Akka Typed, internal DSL

Crawler and scraper with a DSL for navigation, extraction and export; Akka Typed manages concurrent execution.

GitHub repository

Certifications

Certified Partner Specialist Gemini Enterprise Deployment

Google Cloud | September 2026 - March 2027 | View credential

Generative AI Leader Certification

Google Cloud | November 2025 - November 2028 | View credential

Claude 101

Certificate of completion | Anthropic | April 2026 | Credential ID: s8t7chuqcvas

Professional Cloud Developer

Certification in preparation | Target: late October 2026

Languages

Italian: native | **English:** B2, university exam

Available for remote, hybrid or on-site opportunities.
